WORK EXPERIENCE

Software Engineer

Feb 2025 - Present

Discover Financial Services via Capgemini | **TypeScript, Node.js, Redis, GraphQL, React**

Chicago, IL

- Developed a scalable application to help internal teams self-identify issues using Node.js, React, and MongoDB, onboarding 2,000+ applications and delivering audit-level insights on license compliance and governance
- Migrated a monolithic backend to microservices, improving response time by 45% for APIs and supporting 10,000+ users
- Implemented Redis caching and introduced Kafka queues for refresh workflows, reducing redundant API calls by 60% and improving dashboard refresh time from 30s to under 8s
- Refactored UI into 25+ reusable components, improving maintainability and reducing development time for UI features by 35%
- Onboarded 2,000+ internal teams and millions of libraries, delivering audit-level insights on license compliance, control satisfaction, and governance, significantly reducing manual compliance effort
- Integrated CI/CD pipeline workflows into the application, reducing manual release effort by 70% and improving deployment
- Built reusable, modular components with hooks (useState, useEffect, useCallback) to manage state and side effects clearly
- Applied memoization techniques to prevent unnecessary re-renders in data heavy dashboards
- Leveraged AI coding agents to accelerate feature development, improving productivity and reducing implementation time

Senior Software Engineer

Jun 2021 - Jul 2022

Vistaar Systems Pvt. Ltd. | **React, TypeScript, PostgreSQL, Java, Node.js, Redis,**

Mumbai, India

- Led and mentored a team of nine on major projects for Ford, Jim Beam, and Gallo Winery, leveraging Agile methodologies, Git to achieve a 95% on-time delivery rate
- Engineered a Node.js and React mass update module with GraphQL, saving users 5 hours by streamlining data exchange
- Reduced processing time by 70% by implementing Redis caching and migrating security scripts from Node.js to PostgreSQL
- Created a Kafka PubSub model for notifications for 20,000 concurrent users, ensuring low latency with Artillery load testing
- Spearheaded development of a Spring and REST framework, reducing development time by 60%

Software Engineer

Jun 2018 - Jun 2021

Vistaar Systems Pvt. Ltd. | **TypeScript, Node.js, Javascript, Java, PostgreSQL, React**

Mumbai, India

- Boosted application performance by 90% by refactoring Node.js, Express.js code with efficient data structures, implementing in-memory caching, optimizing AWS EC2 instances and validating changes with Jest tests
- Built a React-Spring web app with RESTful APIs, automating data processing, visualization, saving 20 hours of work weekly
- Developed Elasticsearch, Logstash, Kibana app, improving report generation time by 90% (5 hrs to 10 min) enhancing logs
- Achieved 99% data integrity in production, saved 15 hours of effort per week by automating data correction using Java
- Resolved inconsistencies in Redis cache, enhanced logging with AWS S3, and reduced user defects in Jira by 60%
- Led fintech innovations through Agile, Git, strategic leadership, and data-driven decisions, achieving a 20% growth in users

EDUCATION

Master of Science in Computer Science

Sep 2022 - May 2024

Stevens Institute of Technology

Hoboken, NJ

Coursework: Web Programming, Cryptography, Algorithms, Cybersecurity, Requirement Analysis

GPA: 3.7

Bachelor of Engineering in Computer Engineering

Aug 2014 - Jul 2018

University of Mumbai

Mumbai, India

Coursework: Data Structures, Databases, Distributed Databases, Computer Networks

GPA: 3.5

SKILLS & CERTIFICATES

Programming Languages: TypeScript, Javascript, Java, Java

Frameworks: React.js, React, Node.js, Express.js, Spring, Docker, MERN, Tailwind CSS, Redux, Vue.js

Databases: SQL, PostgreSQL, Oracle, PostgreSQL, Redis, NoSQL, MongoDB, MySQL, Elasticsearch, Logstash, Kibana

Engineering Tools: REST API, GraphQL, Linux, Kafka, RabbitMQ, OOP, CI/CD (Jenkins), JUnit, AWS EC2, Git

Certificates: AWS Certified Solution Architect Associate, Claude Certified Architect

PROJECTS

NurtureNest (React, Redis, MongoDB, Node.js, Socket.io)

- Built a robust React Web App using the MERN stack, integrating Redux, Firebase, Socket.io, and AWS S3, to create a childcare management platform that streamlines nanny hiring, task management, and real-time parent communication

Item Pricing Management System (React, Node.js, RabbitMQ, Kubernetes, Docker)

- Developed a stateless microservices system for item pricing at Vistaar Systems, with separate services for reports and the main server. Achieved 99.9% uptime using React and Node.js, RabbitMQ for messaging, and Docker for containerization
